

Application/Selection Guide

Fittings Solutions You Can Trust!

Your fluid handling system isn't complete without fittings to connect tubing lines, equipment, and containers. Cole-Parmer has one of the largest selections in the industry—we have the right fitting for your needs. If you can't find the right fitting in our catalog, you can contact us; we constantly update our product

offering to add new items. You can also contact our Applications Specialists—with a stunning 99.97% accuracy rate, they can help you find the fitting you need.

For specific sizes and materials available, please see each section:

KEY INFORMATION

Barbed fittings
 Pages 510–524

Flare compression fittings
 Contact us for details

Quick-disconnect couplings
 Pages 549–559

High-pressure chromatography fittings (4000 to 10,000 psi)
 Page 572

Microbore tubing connectors
 Page 525

Threaded fittings
 Pages 537–541

**Push-to-connect/
 John Guest® fittings**
 Pages 560–561

PTFE fittings and filters (1000 psi max)
 Pages 573–574

Fitting kits
 Page 548

Flexible PVC fittings
 Contact us for details

Sanitary clamp fittings
 Pages 567–568

Dispensing nozzles
 Page 574

Compression fittings
 Pages 526–536

Luer fittings
 Pages 542–547

Sanitary gaskets
 Pages 569–571

Cam couplers

Certificates of Compliance

Cole-Parmer will provide a certificate of resin or elastomer compliance FREE at your request with each order of fittings, gaskets, or tubing. Certificates list your company's PO number, order reference number, catalog number, formulation, compound number, lot number (where applicable), and the regulations and agencies the fitting, gasket, or tubing complies with, including FDA, USP, USDA, National Formulary, NSF International, GMP, and 3A. Look for the red "compliance star" icon throughout this catalog to identify when a certificate of compliance is available.

compliance certificate

Barbed Fittings

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

Brass. Good chemical resistance. Temp range: –85 to 250°F (–65 to 121°C). Not recommended for sterilization.

High-Density Polyethylene (HDPE). Very good chemical resistance. Temp range: –65 to 150°F (–53 to 65°C). Sterilize by ethylene oxide only.

PVDF. Excellent chemical resistance. Temp range: –80 to 265°F (–62 to 129°C). Sterilize by ethylene oxide or autoclave.

Nylon. Good chemical resistance. Temp range: –50 to 250°F (–46 to 121°C). Sterilize by ethylene oxide only.

PFA. Excellent chemical resistance. Temp range: 0 to 400°F (–17 to 204°C). Sterilize by ethylene oxide or autoclave.

Polypropylene (PP). Very good chemical resistance. Temp range: 9 to 180°F (–13 to 66°C). Sterilize by ethylene oxide or gamma irradiation.

Black: Temp range: 9 to 180°F (–13 to 66°C). Sterilize by ethylene oxide or autoclave.

Clear: Temp range: 32 to 275°F (0 to 135°C). Sterilize by ethylene oxide or autoclave.

White: Temp range: 9 to 180°F (–13 to 66°C). Sterilize by autoclave only.

PVC. Good chemical resistance. Rated at 340 psi at 77°F (25°C). Temp range: –10 to 140°F (–23 to 60°C). Sterilize by ethylene oxide only.

Stainless Steel (316 SS). Very good chemical resistance. Rated at 200 psi at 77°F (25°C). Temp range: –40 to 200°F (–40 to 93°C). Sterilize by ethylene oxide, autoclave, or gamma irradiation.

FREE certificate of compliance is available for noted fittings on this page.

See page 509.

MORE info!

Single barb fittings seal better than multi-barb fittings because they allow the tubing to relax around the barb.

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

Barbed Fittings (continued)

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

FREE certificate of compliance is available for noted fittings on these pages. **See page 509.**

MORE info!

Single barb fittings seal better than multi-barb fittings because they allow the tubing to relax around the barb.

See next page for more...

Barbed Fittings (continued)

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

FREE certificate of compliance is available for noted fittings on these pages. **See page 509.**

Barbed Fittings (continued)

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

FREE certificate of compliance is available for noted fittings on these pages. **See page 509.**

MORE info!

Single barb fittings seal better than multi-barb fittings because they allow the tubing to relax around the barb.

Cole-Parmer
PTFE Thread Tape

PTFE thread sealer tape prevents leaks and seepage at threads. PTFE tape withstands temperatures from -250 to 500°F (-157 to 260°C).

LZ-08270-33 PTFE thread tape (Plumber's). Roll measures 43 ft x 1/2"W

LZ-08270-34 PTFE thread tape (Plumber's). Roll measures 43 ft x 3/4"W

LZ-08782-45 PTFE thread sealer string. Roll of 20 ft x 3/32"W

See next page for more...

FREE certificate of compliance is available for noted fittings on these pages. **See page 509.**

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

NPT male threaded adapter elbows
(continued)

Cole-Parmer PTFE Thread Tape

PTFE thread sealer tape prevents leaks and seepage at threads. PTFE tape withstands temperatures from -250 to 500°F (-157 to 260°C).

LZ-08270-33 PTFE thread tape (Plumber's). Roll measures 43 ft x 1/2"W

LZ-08270-34 PTFE thread tape (Plumber's). Roll measures 43 ft x 3/4"W

LZ-08782-45 PTFE thread sealer string. Roll of 20 ft x 3/32"W

Barbed Fittings (continued)

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

FREE certificate of compliance is available for noted fittings on these pages.

For flexible tubing, see pages 1823–1859.

Barbed, NPT Male Branch Tees / NPT Female Threaded Adapters / Plugs

Barbed fittings are designed for quick and easy assembly without tools. Combine these simple, economical fittings with our flexible tubing for use in your low-pressure applications (generally less than 30 psi). Order tubing on pages 1823–1859.

For material descriptions, refer to page 510.

MASTERFLEX® Barbed Fittings

- Designed to tight tolerances
- Made from virgin materials

Ensure a tight seal every time with Masterflex fittings! Designed to tight tolerances, these fittings match perfectly to your tubing to ensure smooth flow and a proper fit. Fittings are available in four materials and are available in packs of 10.

High-Density Polyethylene (HDPE): Very good chemical resistance. Temp range: -65 to 150°F (-53 to 65°C). Sterilize by ethylene oxide only.

Nylon: Good chemical resistance. Temp range: -50 to 250°F (-46 to 121°C). Sterilize by ethylene oxide only.

Polypropylene (PP): Very good chemical resistance. Temp range: 32 to 275°F (0 to 135°C). Sterilize by ethylene oxide or autoclave.

PVDF: Excellent chemical resistance. Temp range: -80 to 265°F (-62 to 129°C). Sterilize by ethylene oxide or autoclave.

Microbore Tubing Connectors

Connect even the smallest tubing with a leak-free seal from vacuum to 34.5 bar (500 psi)

- Multiple styles to fit your needs
- Stainless steel fitting is autoclavable
- Temperature range from -70 to 500°F (-57 to 260°C)

Compression Fittings

Compression fittings are an excellent choice to connect rigid tubing systems and withstand higher pressures than barbed fittings. Assemble the fitting to the tubing by sliding the tubing through a sealing ferrule and using the nut to compress down to form a secure seal.

Note: Pressure ratings given are for smaller tubing ODs at 77°F (25°C). Ratings decrease with increases in tubing OD or temperature.

Brass. Good chemical resistance; rated to 400 psi. Temp range: -85 to 482°F (-65 to 250°C). Include brass ferrules; UL-listed for use with flammable liquids; meet ASA, ASME, and SAE (J512) standards.

PVDF. Excellent chemical resistance; rated to 220 psi. Temp range: -20 to 275°F (-29 to 135°C). Include plastic grippers. Sterilize by ethylene oxide or autoclave.

Nylon. Good chemical resistance. Temp range: -50 to 250°F (-46 to 121°C). Sterilize by ethylene oxide only.

For rigid and other types of tubing, see our "Tubing" section on pages 1823-1859.

PFA. Superior chemical resistance; rated to 150 psi (40 psi without grooving tool).
Temp range: up to 347°F (175°C). Include built-in ferrules. Sterilize by either ethylene oxide or autoclave.

Polypropylene (PP). Very good chemical resistance.
Black: Rated to 300 psi. Temp range: 0 to 212°F (-17 to 100°C). With SS gripping rings.
Sterilize by autoclave.

White: Rated to 220 psi. Temp range: 32 to 212°F (0 to 100°C). With plastic grippers. Sterilize by ethylene oxide.

Stainless steel (316 SS). Very good chemical resistance; pressure limit depends on the tubing used, not the fitting. Temp range: -40 to 200°F (-40 to 93°C). Include ferrules. Sterilize by either ethylene oxide, autoclave, or gamma irradiation.

Compression fittings are an excellent choice to connect rigid tubing systems and withstand higher pressures than barbed fittings. Assemble the fitting to the tubing by sliding the tubing through a sealing ferrule and using the nut to compress down to form a secure seal.

Note: Pressure ratings given are for smaller tubing ODs at 77°F (25°C). Ratings decrease with increases in tubing OD or temperature.

For materials descriptions, refer to pages 526–527.

PTFE Thread Tape

PTFE thread sealer tape prevents leaks and seepage at threads. PTFE tape withstands temperatures from -250 to 500°F (-157 to 260°C).

[LZ-08270-33](#) PTFE thread tape

(Plumber's). Roll measures 43 ft L x 1/2"W

[LZ-08270-34](#) PTFE thread tape

(Plumber's). Roll measures 43 ft L X 3/4"W

[LZ-08782-45](#) PTFE thread sealer string. Roll of 20 ft x 3/32"W

See next page for more...

Compression Fittings (continued)

Compression fittings are an excellent choice to connect rigid tubing systems and withstand higher pressures than barbed fittings. Assemble the fitting to the tubing by sliding the tubing through a sealing ferrule and using the nut to compress down to form a secure seal.

Note: Pressure ratings given are for smaller tubing ODs at 77°F (25°C). Ratings decrease with increases in tubing OD or temperature.

For materials descriptions, refer to pages 526–527.

Cole-Parmer PTFE Thread Tape

PTFE thread sealer tape prevents leaks and seepage at threads. PTFE tape withstands temperatures from -250 to 500°F (-157 to 260°C).

LZ-08270-33 PTFE thread tape (Plumber's). Roll measures 43 ft L x 1/2"W

LZ-08270-34 PTFE thread tape (Plumber's). Roll measures 43 ft L x 3/4"W

LZ-08782-45 PTFE thread sealer string. Roll of 20 ft x 3/32"W

For rigid and other types of tubing, see our "Tubing" section on pages 1823–1859.

Fittings

Compression, Male Threaded Adapter Elbows

Compression fittings are an excellent choice to connect rigid tubing systems and withstand higher pressures than barbed fittings. Assemble the fitting to the tubing by sliding the tubing through a sealing ferrule and using the nut to compress down to form a secure seal.

Note: Pressure ratings given are for smaller tubing ODs at 77°F (25°C). Ratings decrease with increases in tubing OD or temperature.

For materials descriptions, refer to pages 526–527.

Compression fittings are an excellent choice to connect rigid tubing systems and withstand higher pressures than barbed fittings. Assemble the fitting to the tubing by sliding the tubing through a sealing ferrule and using the nut to compress down to form a secure seal.

Note: Pressure ratings given are for smaller tubing ODs at 77°F (25°C). Ratings decrease with increases in tubing OD or temperature.

For materials descriptions, refer to pages 526–527.

Threaded Fittings

Sturdy threaded fittings are designed for permanent installation. Use with our rigid tubing for your high-pressure applications. Order tubing separately on pages 1823–1859.

Brass. Good chemical resistance. Temp range: –85 to 482°F (–65 to 250°C).

High-density polyethylene (HDPE). Very good chemical resistance. Rated at 150 psi at 77°F (25°C). Temp range: –65 to 190°F (–53 to 87°C). Sterilize by ethylene oxide only.

PVDF. Excellent chemical resistance. Rated at 200 psi at 77°F (25°C). Temp range: –79 to 275°F (–62 to 135°C). Sterilize by ethylene oxide or autoclave.

TECHNICAL info!

Pipe Thread Sizes

Originally, pipes were specified with a standardized outside diameter (OD) and wall thickness so the nominal pipe size would approximately equal the inside diameter (ID). Because this relationship between the OD, wall thickness, and nominal pipe size no longer holds true, NPT (National Pipe Taper) and UNF (Unified Fine Thread) inch scales are different from the standard English inch scale. The drawings below illustrate this difference—if you are uncertain about the fitting size you require, compare your existing fittings to the drawings below.

Size	Threads per inch	
	NPT	BSP
1/8"	27	28
1/4"	18	19
3/8"	18	19
1/2"	14	14
3/4"	14	14

Cole-Parmer also offers BSP (British Standard Pipe) fittings for connecting systems that use both NPT and BSP thread configurations. See the table at left for a comparison of these two thread styles.

Threaded Fittings (continued from page 537)

Female-to-male elbows

Linear low-density polyethylene (LLDPE). Very good chemical resistance.
Temp range: -65 to 150°F (-54 to 66°C). Sterilize by ethylene oxide only.

Polypropylene (PP). Very good chemical resistance. Rated at 200 psi at 77°F (25°C).
Temp range: 0 to 275°F (-17 to 135°C). Sterilize by ethylene oxide or gamma.

Nylon. Good chemical resistance. Rated at 200 psi at 77°F (25°C).
Temp range: -40 to 200°F (-40 to 93°C). Sterilize by ethylene oxide only.

Fittings

Threaded, Reducers / Bushings

Sturdy, threaded fittings are designed for permanent installation. Use with our rigid tubing for your high-pressure applications. Order tubing separately on pages 1823–1859.

For material descriptions, refer to pages 537–538.

Threaded Fittings (continued)

Sturdy, threaded fittings are designed for permanent installation. Use with our rigid tubing for your high-pressure applications. Order tubing separately on pages 1823–1859.

For material descriptions, refer to pages 537–538.

**Nylon fittings have no gaskets; PVC and PP fittings have neoprene gaskets; LLDPE fittings have EPDM gaskets; PVDF fittings have Viton® gaskets.

*NPT(F) thread throughout.
*NPT(F) thread on one side only.

Swivel bulkhead connectors

Thermoplastic NPT(F) Manifolds

Come in a variety of configurations—two, four, six, eight, or ten outlets

Specifications

Material	Maximum pressure	Temperature range
Nylon	200 psi	-60 to 180°F (-54 to 82°C)
Polypropylene	150 psi	32 to 210°F (0 to 99°C)
PTFE	120 psi	-200 to 300°F (-129 to 150°C)
PVDF	150 psi	-65 to 230°F (54 to 110°C)

Polypropylene manifold 31522-25

PTFE manifold 31521-11

MORE info!

Manifolds are also available in acetal, 304 stainless steel, and brass. Contact your local dealer.

Cole-Parmer Premium Luer Fittings

Full material traceability to ensure process integrity

- Manufactured from 100% virgin raw materials in a Class 100,000 environment

These luer fittings are ideal for a variety of applications that use syringes or small tubing. Barbed adapters feature three styles of barbs: standard, wide-bore, and low-profile. Wide-bore barbs offer enhanced fluid flow through the fitting and are usable with any flexible tubing. Low-profile barbs are ideal for use with semi-rigid tubing, such as nylon, polyethylene, or polypropylene. Manufactured in compliance with ISO 594-1 standards, these fittings are cleaned, inspected, and fully traceable. All parts meet tight dimensional tolerances for increased reliability and process purity. Choose from a range of sizes, 1/16" to 1/4", with a variety of connection options. **Sold in packs of 25.** (Also available in packs of 100; contact Cole-Parmer for details).

FREE certificate of compliance is available for all fittings on this page. **See page 509.**

Polypropylene (PP). Manufactured of animal-free natural polypropylene. Meets USP Class VI specifications. Very good chemical resistance. Max temperature 190°F (87°C). Sterilize by ethylene oxide and gamma irradiation (not recommended for autoclaving).

Polycarbonate (PC). Good chemical resistance. Max temperature 273°F (133°C). Sterilize by ethylene oxide and gamma (not recommended for autoclaving).

Nylon. Good chemical resistance. Max temperature 455°F (235°C). Sterilize by autoclave, ethylene oxide or gamma irradiation.

PVDF. Excellent chemical resistance. Animal-derived ingredient free. Max temperature 244°F (117°C). Sterilize by autoclave, ethylene oxide, or gamma irradiation.

CrystalVu™ Luer Fittings

NEW

Available in 6 colors for quick and easy identification: berry, rose, yellow, lime, violet, and orange. Made of polyolefin, a transparent polycarbonate alternative containing no bisphenol-A (BPA). Superior chemical resistance compared to polycarbonate. Sterilize by autoclave, gamma irradiation, or ethylene oxide. Meets USP Class VI. Animal-derived ingredient-free. **Packs of 25.**

PVC Tubing with Luer Ends

Tubing has luer fittings at each end—choose male/male or male/female fitting combinations in 24" or 48" lengths. Rated at 500 psi (34.5 bar) injection pressure; measures 0.065" ID (0.125" OD). Choose from packs of five or 20. Sterilize by ETO.

Length	Fitting ends	Pack of 5		Pack of 20

Speciality Plastic Luer Fittings

Luer fittings are the standard connection type for syringes. Their size and quick-release connection make them perfect for many applications with small tubing as well as syringes. These specialized luer fittings and adapters help build a complete fluid handling system.

Cole-Parmer Large-Bore Slip-Fit Adapters

Larger bore for enhanced fluid flow

These large-bore adapters are perfect for handling higher flow volumes in process while using connections similar to luer systems. Adapters are manufactured in an ISO Class 8 (formerly Class 100,000) environment, are inspected to be free of contaminants, and are fully lot traceable.

Note: These are not compatible with standard luer fittings.

Specifications

Plastic Luer Assemblies

Multiple styles to choose

Luer assemblies can be used to connect to bio-bags, injection sites, or a sampling tube. Fitting is molded onto the tubing for a seamless transition. Each assembly comes packaged individually. Assemblies can be sterilized.

Key	Catalog number	Features	Terminations	Material	Price
Tubing assemblies					
A	TW-30526-00	3-way assembly branches on port into three ports. Each branch is color coded and includes a pinch clamp to stop or slow flow without disconnecting tubing.	Male luer lock x female luer	Polycarbonate luer fittings and PVC tubing	/ pk of 10
B	TW-30526-02	Single inlet branches into two tubes each with two more branches for a total of four outlet connections. Each pair of branches includes a slide clamp to stop or slow flow.	Male luer lock x female luer	Polycarbonate luer fittings and PVC tubing	/ pk of 10
C	TW-30526-04	Stopcock attached to 12" of tubing molded to a luer termination. Stopcock is labeled for two-way, three-way, and off positions.	3-way stopcock with two female luer connections x male luer lock	Polycarbonate luer fittings and PVC tubing	/ pk of 10
Luer adapters					
D	TW-30526-06	Y-branch fitting with rigid tubing.	Male swivel luer lock x One branch: female luer Other: variable size compression fitting that will accept up to 1/8" tubing	Polycarbonate rigid tubing body and polycarbonate fitting with silicone gasket in the compression fitting.	/ pk of 10

High-Performance Glass Syringes

07939-22 with luer tip

07939-32 with PTFE luer lock

Sample loss is negligible at maximum pressures of 200 psi (13.8 bar), depending on bore diameter. These essentially inert syringes have plungers coated with PTFE (except 50 µL and 100 µL models). Barrels and plungers are interchangeable within each syringe size, making field repair possible.

Cole-Parmer Plastic Fitting Kits

Get organized today!

Organize your workstation with these convenient barbed fittings kits. Assorted fittings come in an impact-resistant plastic box with secure snap-shut latches to prevent spillage. Labeled compartments let you easily locate the fittings you want. Choose from four materials: high-density polyethylene, black nylon, natural polypropylene, and natural PVDF. Storage racks for the fitting kits are sold separately below.

Note: Storage racks are for kits only, not assortment packs.

High-Density Polyethylene (HDPE)

Very good chemical resistance.
Temp range: -65 to 190°F (-53 to 87°C)

Nylon

Good chemical resistance.
Temp range: -40 to 200°F (-40 to 93°C)

Natural Polypropylene (PP)

Very good chemical resistance.
Temp range: 0 to 275°F (-17 to 135°C)

PVDF

Excellent chemical resistance.
Temp range: -79 to 275°F (-62 to 35°C)

Labeled compartments help you find the fitting you want in a snap!

MORE info!

Single barb fittings seal better than multi-barb fittings because they allow the tubing to relax around the barb.

FREE certificate of compliance is available for noted fittings on this page.

See page 509.

Mini fitting assortment pack. Contains 25 straight fittings, and 3/32" tubing ID sizes (240 pieces total)	PP	TW-06365-90	
T connector pack. Contains six each of the 4- to 14-mm sizes (36 pieces total)	PP	TW-06294-82	
Y connector pack. Contains six each of the 4- to 14-mm sizes	PP	TW-06295-82	
Straight/reducing connector pack. Contains two of each size of 1/16" to 1/8" fittings. (22 pieces total)	PP	TW-06460-00	
Assorted luer fittings (477 pieces total). See ColeParmer.com for kit composition.	PP, nylon, PC	TW-45511-00	

TW-31513-12 Storage rack holds four kits (models 31514-01, -02, -03, -04, -17, -18, -19, -20, -25, -26, -27, -28)
TW-31513-32 Storage rack holds four kits (all other models)

Note: Storage racks above are for kits only, not assortment packs.

Application/Selection Guide

CPC The Colder Products Advantage

Cole-Parmer is proud to offer Colder Products quick-disconnect connectors, a practical and cost-effective solution you can trust from a superior product. CPC connectors meet the needs of the lab, industrial, pharmaceutical, and chemical markets, among others, by offering you the following benefits:

Flexibility. We offer many materials and many connection options, with pressures up to 250 psi and temperatures from -40 to 300°F (-40 to 149°C). Colder connectors accommodate microbore to 3/4" inner diameter tubing.

Serviceability. Replacing parts or switching lines is easy and intuitive for less downtime and greater process efficiency.

Safety. Most models offer shut-off valves to reduce spills and leaks, even under pressure, to protect consumer and employee safety.

Convenience. CPC's thumb-latch design allows easy one-handed operation on most models. An audible click confirms a secure seal.

TECHNICAL info!

Automatic Latching:
To connect coupling, slide insert into body, feel the latch engage and hear the "click"—it's secure!

Coupling Materials:
ABS, acetal, chrome-plated brass, polycarbonate, polypropylene, polysulfone, PVDF and stainless steel

Quick-Disconnect Couplings

Available in acetal or polypropylene construction

Choose from four styles—hose barb, compression, push-to-connect, and NPT threaded adapter—for either standard in-line or panel-mount configurations

For each complete quick-disconnect fitting, order one body (below) and one insert (page 551) with the same flow size. Plug insert into body to connect fitting—fitting halves lock in place immediately. To disconnect fitting halves, simply press the thumb latch on the coupling body; a spring-operated valve in each fitting half seals the flow path. (“Straight-through” fittings without shutoff valves are also available.) All fitting bodies have 316 stainless steel springs and latches.

Quick-Disconnect Bodies (Female Coupling Halves)

CPC Plastic Quick-Disconnect Fittings

100 percent metal-free flow path on select models!

- Acetal fittings are ideal for use with corrosive fluids
- Polycarbonate and polysulfone materials meet USP Class VI requirements

Simply press the thumb latch to disconnect coupling halves. Polycarbonate and polysulfone materials meet USP Class VI requirements and pass all physicochemical, cytotoxicity, leachables, and extractables tests. Certificate of Compliance is available for polycarbonate and polysulfone fittings on this page. Order complete couplings or separate bodies and inserts from the tables below. **Note:** Standard bodies and inserts fit together; won't work with large bodies and inserts and vice versa. For one complete coupling, order one fitting body and one insert. As an alternative, complete couplings are available below.

FREE certificate of compliance is available for PC and PSF fittings on this page.

See page 509.

Specifications

Body material	Acetal	Polycarbonate (PC)	Polysulfone (PSF)
Temperature range	-40 to 180°F (-40 to 82°C)	-40 to 250°F (-40 to 121°C)	-40 to 300°F (-40 to 148°C)
Max pressure	120 psi (8.3 bar)	125 psi† (8.6 bar)	120 psi (8.6 bar)
Max vacuum	28" Hg (711.2 torr)	25" Hg (635 torr)	25" Hg (635 torr)
Sterilization	Autoclave or ETO	Autoclave, ETO, or gamma irradiation	Autoclave, ETO, or gamma irradiation

†Max pressure for 1/2" polycarbonate fittings is 60 psi.

CPC High-Flow Quick-Disconnect Couplings

Valved models offer automatic flow shutoff

A complete quick-disconnect fitting consists of a body and an insert (order fitting halves separately). Plug insert into coupling body to connect—fitting halves lock into place immediately. To disconnect fitting halves, simply press the button on the coupling body.

Valved models have a spring-operated 316 SS valve that seals the flow path when fitting halves are disengaged. All fitting bodies have 316 SS latch springs and EPDM seals.

Specifications

	Polypropylene	Polysulfone
Body material	Polypropylene	Polysulfone
Temperature range	0 to 71°C (32 to 160°F)	-40 to 137°C (-40 to 280°F)
Max pressure	60 psi (4.14 bar)	125 psi (8.62 bar)
Max vacuum	27.5" Hg (698.5 torr)	27.5" Hg (698.5 torr)
Sterilisation	ETO or gamma	Autoclave, ETO, or gamma

CPC Miniature Quick-Disconnect Couplings

Able to handle 1/16" inner-diameter tubing, these fittings offer a more secure connection alternative to luer fittings. Fittings halves engage and seal with a twist. Once engaged, the coupling allows the tubing to rotate freely to help prevent kinked tubing and accidental disconnections.

For a complete coupling, order one fitting body and one insert. As an alternative, complete couplings are available below.

Note: All acetal fittings on this page are available in black as well as natural white. Please contact an Application Specialist for more information.

Find MORE!

Flexible tubing is available in sizes from 0.19 mm ID to 1 1/2" ID. For our complete selection of tubing, see pages 1823-1829.

Fittings

Quick-Disconnect, Non-Spill / Polysulfone

CPC Non-Spill Quick-Disconnect Couplings

As little as 0.025 mL spillage

The patented design of these non-spill series of couplings ensure minimal leaks and air inclusions in your process line—protects process purity and minimizes loss due to accidental disconnects. The NS2 series non-spill couplings feature a twist-to-connect design for worry-free fit. The NS4 and NS6 series non-spill couplings confirm secure engagement with an audible click. Choose one body and one insert, each from the same coupling series (NS2, NS4, or NS6) for a fitting that will work in multiple applications.

Specifications

Series	NS2	NS4	NS6
Body material	Glass-filled polypropylene		
O-ring material	EPDM		
Temp range	32 to 120°F (0 to 49°C)	32 to 160°F (0 to 71°C)	
Max pressure	45 psi (3.1 bar)	120 psi (8.3 bar)	
Max flow	3.75 GPM (14.2 LPM)	3.75 GPM (14.2 LPM)	13.0 GPM (49.2 LPM)
Spillage	<0.025 mL	<0.10 mL	<0.3 mL

CPC Polysulfone Quick-Disconnect Couplings

USP Class VI compliant

- Automatic shutoff valves
- BSE/TSE-free material

For a complete quick-disconnect fitting, order both a body and insert separately below. Body and seal materials are made of USP Class VI-compliant and BSE/TSE-free materials. An audible click when the body and insert are coupled confirms a secure, leak-free connection. The automatic shutoff valve closes off the flow path at disconnection, protecting valuable media while eliminating the need for pinch clamps. Thumb latch enables easy one-handed operation.

Specifications

Body material	Polysulfone
O-ring material	Silicone, platinum-cured
Valve spring	316 stainless steel
Temperature range	-40 to 280°F (-40 to 138°C)
Pressure range	Vacuum to 125 psi (8.62 bar)
Sterilization	Autoclave or gamma irradiation

Fittings

Quick-Disconnect, SRC / SnapQuik / Side Latch

CPC Quick-Click SRC Connectors

The quick-click SRC connectors eliminate the potential for mistakenly mating with a luer line, making it easier to manage multiple connections. To mate, simply press the insert into the body; an audible click confirms a secure connection. The innovative design allows the insert to rotate inside the coupling body, even when engaged, to prevent accidental disconnects or kinked tubing. The coupling is made from medical-grade polypropylene, meets the stringent requirements of USP Class VI, and passes all MEM elution, agarose overlay, hemolysis in vitro, and USP physicochemical tests.

Specifications

Body material	Polypropylene
Seal material	USP Class VI overmolded thermoplastic elastomer (TPE)
Temp range	32 to 120°F (0 to 49°C)
Pressure	Vacuum to 25 psi (1.7 bar)
Sterilization	EtO, gamma, e-beam

31312-03

TW-31312-04	3/16"	

CPC SnapQuik™ Connectors

High-flow fluid transfer in a small profile

The SnapQuik is the ideal quick-disconnect fitting for your small bore applications. The break-away latch mechanism allows for quick and easy disconnection, while the internal latch design allows for a streamlined exterior that is easy to clean. The audible click assures a reliable connection is made. A complete coupling consists of one body and one insert.

Specifications

Body material	Acetal
Seal material	Buna N
Temp range	32 to 122°F (0 to 50°C)
Pressure	Vacuum to 15 psi (1.0 bar)
Sterilization	Autoclave or ETO

Cole-Parmer Side-Latch Quick Connectors

Features an audible click—every hookup is simple, safe, and secure!

These reusable, cost-effective connectors are designed to meet your requirements for small-bore applications in all fluid delivery applications. Manufactured from durable nylon with a Buna N O-ring seal, these connectors are offered in contrasting colors. For a complete coupling, order one female and one male connector.

Specifications

CPC AseptiQuik™ Connectors

Provide easy, secure sterile connections even in nonsterile environments

- Quick, three-step connection process reduces risk of operator error
- Large housing size allows easy installation

Manufactured from sturdy polycarbonate, these connectors come clean and are for single-use and sanitary applications. Use connectors with filters, tubing, and process containers to create systems for upstream or downstream processes.

Simply fit the connector half in your tubing line. Push the male and female connectors together; an audible snap confirms a tight connection. Align and snap membrane connectors together; pull from connector. Twist blue lock ring clockwise to hear another audible click. Alignment of the ring rib with the body's arrow indicator confirms final, secure connection. Use high temperature fittings to sterilize via autoclave. Now three series to meet your needs; standard, S-low flow (genderless), and X-high flow.

Specifications

	Standard	High Temperature
Body material		Polycarbonate
Seal material		Platinum-cured silicone
Temp range		39 to 104°F (4 to 40°C)
Max pressure		60 psi (4.4 bar)
Sterilization	Gamma irradiation	Autoclave or gamma irradiation

CPC ChemQuik® Quick-Disconnect Couplings

- 100% metal-free couplings are ideal for ultrapure fluids, deionized water, and aggressive chemical applications

These quick-disconnect couplings provide easy single-handed disconnection. Valves provide flow shut-off. For a complete coupling, order one body and one insert of the same size.

CPC Steam-in-Place Connectors

One disposable connector for steam sterilization and microbial process

- Ensures a sterile connection
- Reduces downtime and cleaning expenses

As part of a single-use system, these disposable connectors enhance the sterility of your bioprocessing line. The innovative product design allows for a one-step process for sterilization and media transfer while eliminating dead spots, reducing the number of connections, and eliminating the need for a laminar flow hood. Terminations on these connectors are set to industry standards for bioreactors and are available in popular sizes of flexible tubing. All wetted surfaces meet requirements for USP Class VI, MEM elution, hemolysis in vitro, and physicochemical tests. All units are made of animal-free medical-grade polysulfone. Choose from two designs: the original Steam-Thru® Connection and Steam-Thru II.

31604-10

The original Steam-Thru connectors feature a three-port design that allows steam to pass directly through the power ports to "steam on" to stainless equipment. Once the SIP cycle is completed, remove the tear-away sleeve to actuate the valve and create a sterile flow path. Once actuated, the connection cannot be reversed because valve actuation punctures the internal membrane to allow flow of media. When the process is complete, the connector may be safely disposed.

The Steam-Thru II connectors offer the additional benefit of both "steam on" and "steam off" functionality. The valve can return to the steam position to allow a second steam cycle after media transfer.

TECHNICAL info!

Steam Process (1)

Steam flows from the bioreactor through the connector to sterilize the connection. With the tear-away sleeve in place, the transfer of fluid to or from the bioreactor is prevented.

Flow Process (2)

When the tear-away sleeve is removed and the connector is actuated, the connection to the steam trap is disabled and the media flow bath to or from the bioreactor is accessible.

Specifications

Pressure rating

Steam position: 30 psi (2.1 bar)
Flow position: vacuum to 20 psi (1.4 bar)

Temperature rating

Steam position: 266°F (130°C) for up to 60 min
Flow position: 39 to 104°F (4 to 40°C)

Materials

Body: polysulfone body
Sleeve: PE (31604-10 thru -16) or PC (31604-18 thru -24)
Membrane: silicone membrane

Catalog number	Steam inlet	Connections		Sterilization methods ¹	Price

¹SIP = steam-in-place process up to 266°F (130°C) for 60 minutes; G = gamma radiation up to 50 kGy for one cycle; A = autoclave at 265°F (128°C) for 30 minutes up to two cycles.

CPC Quick-Disconnect Sanitary Couplings

Attach directly to your sanitary hardware assemblies!

- USP Class IV materials
- Fully sterilizable

These couplings allow you to integrate disposables with your existing stainless steel processing equipment. Both couplings and inserts are available with standard sanitary terminations to attach to your system with a sanitary gasket and tri-clover clamps. Choose from polysulfone (PSF) or 316 stainless steel (SS) inserts to mate to polysulfone bodies. All models feature USP Class VI platinum-cured silicone gaskets. Mix and match these bodies and inserts with the polysulfone quick-disconnect coupling elements on page 552 for greater flexibility in your process system with fittings either standard or large.

Specifications

Body material	PSF or 316 stainless steel
O-ring material	USP Class VI platinum-cured silicone
Temp range	-40 to 300°F (-40 to 149°C)
Max pressure	60 psi (4.1 bar)
Sterilization	PSF: autoclave, gamma, ETO, or ebeam SS: autoclave or gamma irradiation

CPC Metal Quick-Disconnect Couplings

Rugged fittings are ideal for pressure and vacuum applications

These quick-disconnect fittings consist of two fitting halves—order coupling bodies (female halves) and inserts (male halves) with the same flow size. Fittings withstand pressures from vacuum to 250 psi (17.2 bar), temperatures from -40 to 180°F (-40 to 82°C). In addition to vacuum and pressure applications, these fittings can be used for liquids. Made of chrome-plated brass with stainless steel springs and latch. Valved fittings have acetal shutoff valves that seal the flow path when fitting halves are disconnected.

Quick-Disconnect Bodies

(Female Fitting Halves)

Fittings and Adapters

- Meet NSF and FDA requirements for food-grade applications
- Quick-disconnect convenience for a wide variety of tubing material—including soft metals!

A single fitting offers secure connections and quick disconnection—no need to purchase two fitting halves. Simply push tubing past the O-ring to the internal tube stop—steel teeth on the collet grip tubing for leakproof connections. To disconnect, press collet against fitting body to disengage steel teeth—tubing slides right out.

Fittings work with semirigid plastic (polypropylene, polyethylene, nylon) and soft metal (brass, copper, mild steel) tubing. To connect flexible tubing such as Tygon® or silicone, order soft tube supports “X” on page 561.

Adapters let you permanently modify basic fittings for customized installations. Tube-to-hose stems “S” and elbows “T” adapt fittings for braided tubing.

Specifications

Materials: acetal body, nitrile O-ring, and acetal/stainless steel collet

Temperature range: -14 to 167°F (-25 to 75°C) for air; 33 to 140°F (0 to 60°C) for water

Max pressure: 150 psi (10.3 bar) for air, 250 psi (17.2 bar) for water

Max vacuum: 30" Hg (762 mm Hg)

Sterilization: autoclave or EtO

TECHNICAL info!

You can build your own permanent configuration by combining fittings with adapters. For example, combine union adapter with a male pipe thread adapter to create a swivel elbow adapter.

D Union elbow fitting + **V** Male pipe thread adapter = Swivel elbow adapter

Polypropylene (PP) and PVDF Sanitary Clamp Fittings

- Meet USP Class VI for pharmaceutical use and FDA, USDA, and 3A standards for food contact
- All fittings are compatible with Tri-Clamp® fittings
- Excellent chemical resistance; low leachable characteristics

Note: Though both materials may be autoclaved, PVDF tolerates high temperatures better than PP does and will perform more consistently after repeated autoclaving.

PFA Sanitary Clamp Fittings

Ideal for extremely corrosive materials—PFA will not rouge or pit

- Inert, nonstick surfaces—perfect for fragile and metal-sensitive proteins
- Employ regular steam-in-place cycles without worry
- Fully compatible with other Tri-Clamp® connections
- Protective overmolding reinforces clamp connection sites
- Full static vacuum capability at 300°F (149°C)

Sanitary applications that use highly corrosive chemicals require fittings that can endure the punishment. These food and pharmaceutical quality PFA fittings are easily cleaned so you will minimize downtime, cross contamination, and yield loss. Autoclavable.

Specifications

Pressure ratings:

- 100 psig @ ambient temperature
- 60 psig @ 180°F (6.9 bar at 82°C)
- 60 psig @ 35°F (4.1 bar at 1.66 °C)

Maximum temperature for normal operating parameters:

- 180°F (82°C) @ 14.7 psig (1 bar)

Vacuum:

- full static vacuum capability at 300°F (149°C)

Autoclavability:

- 255°F (124°C) autoclave temperature while components are not under load or bolted together in a valve assembly

Approvals:

- FDA, USP Class VI, 3A, and USDA Sanitary Standards

Cole-Parmer® 316L and 304 Stainless Steel Sanitary Clamp Couplings

Meet FDA requirements and 3A Sanitary Standards

Cole-Parmer proudly offers these sanitary clamp couplings to meet the demands of our customers. All couplings are compatible with standard 304L fittings clamps. Choose from 316L stainless steel or 304 stainless steel materials.

316L Stainless Steel Couplings are ideal for the pharmaceutical industry; they offer great chemical compatibility for use with corrosive acids and bases.

304 Stainless Steel Couplings are ideal for the food, beverage, and dairy industries; they offer good chemical compatibility and are cost effective.

ASME-BPE BioPharm Fittings

For your critical applications—fittings meet ASME-BPE 2002 specifications

- Interior surface finishes available in both 20Ra Mechanical and 15Ra Electropolished
- All fittings are pin-stamped with material grade, heat number(s) and appropriate ASME-BPE surface finish designation
- Mill Test Reports (MTRs) available on all BPE sanitary fittings

Biopharm products are designed and built to meet the most stringent requirements of ultra-pure processing, including the ASME BPE 2002 specifications for dimensions, surface finishes and tolerances. These fittings are ideal for pharmaceutical, biotechnological and other ultra-pure applications. Biopharm fittings are subjected to rigorous quality control inspections then capped and shrink-wrapped to ensure safe storage and shipping. All Biopharm fittings are constructed of 316L stainless steel.

MORE info!

Contact your local dealer for sizes up to 4", additional styles, and connection types.

MORE info!

Roughness Average (Ra) is the arithmetic mean of the peaks and valleys on the surface of the fitting. The lower the Ra reading, the smoother the surface.

Fittings

Sanitary, Sani-Lock / Smart Clamp

316L Stainless Steel Quick-Connect Clamps

No hinge clamp required—rapid one-hand connection

- Snap-in-place locking arms secure fitting, while safety pins prevent accidental release
- Fully compatible with sanitary Tri-Clamp® fittings
- 150 psi (10.3 bar) working line pressure

Converts any connection into a sanitary “quick-connect” connection. Sani-Lock provides the convenience and efficiency of a quick-connect while maintaining the integrity of a sanitary connection. Use with Tuf-Flex® gaskets for guaranteed leak-proof alignment (sold separately below). Automatic alignment of the Tuf-Flex gasket eliminates over and under compression of gaskets. The locking arms snap in place to create a secure connection.

Stainless Steel Sanitary Clamps

Torque control for consistent sealing of fittings

These sanitary clamps feature a unique design that allows fast clamping while reducing the repetitive strain injuries in hands and fingers that can occur with regular sanitary clamps; only a half turn is required. Clamps also have an adjustable torque for compression control and feature multiple settings for use with a variety of sanitary gaskets. Threadless design prevents soil and bacteria entrapment. Clamps also support ASME-BPE standards.

Single-Use Sanitary Clamps

Fast, safe, secure, and cost-effective connections!

- Even 360-degree compression to prevent leakage
- Withstands pressures up to 100 psi (6.9 bar)
- Reduces installation time

SaniSure clamps feature an innovative design for fast, safe, secure connections and offer a cost-effective solution for connecting single-use installations. Made of USP Class VI-approved nylon, these clamps are designed for single use applications but are durable enough to withstand repetitive use. Unlike traditional two-point load stainless steel sanitary clamps, the design of these clamps ensure even 360-degree compression over the entire fitting surface—no more leaks and no gasket intrusion in your process line! Their low-profile rounded edges reduce the risk of penetrating bag assemblies, and the evenly controlled compression allows easy connection for plastic-to-plastic, plastic-to-stainless steel, or stainless steel-to-stainless steel coupling joints.

To use, simply insert the cable tie end in its mate a couple clicks; position clamp on ferrule; hold both clamp parts together; move clamp around the tri-clamp fitting joint and slide clamp closed. Complete the closure by using the clamping tool to bring it to the proper tension. The easy-to-use design reduces chances of risk associated with carpal tunnel or other wrist injuries and yields a tamper-proof connection that is not operator dependent. As a single-use device, they eliminate need for cleaning validations and reduce your overall downtime for installation.

Pregasketed Sanitary Connectors

- Meet USP Class VI requirements for pharmaceutical use and FDA, USDA, and 3A standards for food contact
- All fittings are compatible with Tri-Clamp® fittings
- Excellent chemical resistance with low leachable characteristics

These sanitary flange connectors come pregasketed with a medical-grade platinum-cured silicone gasket. All materials are certified animal-free and are noncytotoxic and nonhemolytic. Other sizes and styles are available—call for details.

Specifications

Body material: polypropylene, certified animal-derived component-free

Gasket material: platinum-cured silicone

Max pressure: 75 psi (5.2 bar) at ambient

Temperature range: -4 to 167°F (-20 to 75°C)

Sterilization: autoclave or gamma irradiation

Presterilized Connectors

- Maintain sterile integrity and ensure a secure connection
- Easy connections in seconds to reduce fluid line downtime
- Accommodate full system sterilization

With the Kleenpak connector, system sterility is ensured when connecting two separate presterilized lines. Each connector system consists of presterilized male and female halves. Barbed ends connect to 1/2" (13 mm) nominal tubing. Made from polycarbonate, the connectors are designed to withstand autoclaving or gamma irradiation. All Kleenpak connectors come with a Certificate of Test confirming the quality standards and quality control tests performed.

To use, install the connector half in your tubing line, and sterilize the assembly. Mate to the corresponding connector half; an audible snap ensures a tight union. Peel away the strips on the connector halves. Rotate the thumb rest on the male connector half, then push the thumb rest down to the base of the barrel to complete actuation.

Plastic Sanitary Couplings

Meet USP Class VI and FDA requirements for food contact

Tapered funnel design reduces “dead space” for exceptionally smooth fluid flow. Smooth inner surface prevents particle entrapment; seamless construction prevents contamination by eliminating leaks and areas of potential bacterial growth. Sterilize by gamma irradiation. Choose from three polymers; order silicone gasket and PVDF push/pull clamp separately below.

Animal-Derived Ingredient-Free Polypropylene Sanitary Adapters

No BSE documentation required!

These adapters are the perfect transition from sanitary clamp connections to a barb for flexible tubing. All adapters feature a radiused flow surface controlled to 15 micron Ra to ensure a smooth, uninterrupted flow and no particulate buildup. There are no sharp edges in the flow path, so cleaning is very easy.

Made from animal-derived ingredient-free polypropylene, these adapters offer good chemical resistance and may be sterilized by gamma irradiation. Material meets the requirements for USP Class VI. Available with 3/8" or 1/2" hose barb, and 3/4" mini or 1/2" standard sanitary clamp connections. Pair with Cole-Parmer® platinum-cured silicone sanitary gaskets for a connection that is completely free of animal-derived ingredients.

MORE info!

Roughness Average (Ra) is the arithmetic mean of the peaks and valleys on the surface of the fitting. The lower the Ra reading, the smoother the surface.

316L Stainless Steel Sanitary Couplings

Meet USDA and FDA requirements and 3A Sanitary Standards

Unlike permanent couplers, these couplers can be attached to a length of tubing when the old tubing wears out. Suitable for clean-in-place, steam-in-place, and autoclaving for reuse; compatible with Tri-Clamp® fittings. The internal stem is made of 316L stainless steel with an interior surface finish of 25Ra (roughness average) or better. Fittings also feature an external sleeve made from a high-temperature, high-strength polymer and a PTFE O-ring to protect against any external entrapment. Compression seal eliminates wicking between couplers and tubing. Use with flexible tubing (order on pages 1823–1859). Step-up couplers are available upon request—call our Application Specialists for details.

Cole-Parmer Gaskets for Sanitary Fittings

These gaskets are for Tri-Clamp® style fittings and come in a wide variety of materials to match your specific process needs. All gaskets meet FDA CFR Title 21 CFR 177.2600, USDA, 3A, and cGMP criteria. The silicone, EPDM, FKM, and PTFE gaskets are free of animal-derived ingredients and meet USP Class VI, EP 3.1.9, and cytotoxicity criteria. **All gaskets are sold in pack of 10.** Contact Cole-Parmer for other sizes or materials.

Platinum-Cured Silicone is ideal for most pharmaceutical, food, and beverage processing applications. Odorless and tasteless to ensure media purity. Usable from -58 to 446°F (-50 to 230°C). Maybe undergo SIP.

EPDM offers good chemical resistance. An economical choice for water, acetone, or ketone applications. Usable from -65 to 212°F (-54 to 100°C).

Buna N offers good chemical resistance, particularly for petroleum-based products or cold water. Usable over a range from -65 to 275°F (-54 to 135°C).

FKM offers excellent chemical resistance, especially to many acids and alkalis. The best choice for many pharmaceutical, chemical, automotive, or fuel applications. Usable from -25 to 400°F (-32 to 204°C). Sterilization is not recommended.

PTFE offers excellent chemical compatibility. Highly resistant to stress cracking and corrosion. Usable from -450 to 550°F (-268 to 288°C).

Flexible Gaskets

Ensure a better process seal with outstanding chemical resistance

- The chemical resistance of PTFE and the flexibility of an elastomer
- Designed for CIP/SIP conditions

The Tuf-Flex gasket grafts a PTFE envelope to an elastomer core. Unlike pure PTFE gaskets, or even other sheathed gaskets, Tuf-Flex will not creep or cold flow over time and therefore maintains the integrity of its seal in your process line. The core gives the gasket the mechanical properties of an elastomer, including memory and flexibility. Designed to meet the stringent requirements of biopharmaceutical, ultra-pure water, WFI (water for injection), and food and beverage processing applications. Has USP Class VI certification; meets USDA and 3A sanitary standards. Material is free of animal-derived ingredients.

Rugged Gaskets

The benefits of PTFE and 316L stainless steel in one gasket!

- Ideal for SIP and WFI applications
- No cold flow or creep
- Durability helps reduce system downtime

The Tuf-Steel gasket combines the outstanding chemical resistance of a fluoropolymer with the rugged durability of stainless steel. Made of a unique blend of PTFE and 316L passivated stainless steel, this gasket eliminates the potential for gouging and forms a leakproof seal. It contains no pigments and has a pharmaceutical-grade inner diameter finish. An outstanding choice for steam in place (SIP) and water for injection (WFI) applications. This material has a USP Class VI certification and meets USDA and 3A sanitary standards. Usable from -20 to 500°F (-29 to 260°C).

NEW

X-rayable/Metal-Detectable Sanitary Gaskets

Easily detect lost elastomeric fragments to prevent contamination and product recalls

- Designed for food processing, microbial, high-temperature, and mechanical applications
- Available in five materials

These metal-detectable gaskets provide an easy and cost-effective solution to product contamination. By manufacturing a standard elastomer with a metal-impregnated compound, any displaced rubber material can now be located by an in-line metal detector or X-ray equipment. The metal-infused elastomer allows you to readily detect any part of the gasket that has sheared off due to wear.

As a result of excessive use, shearing and damage can occur to gaskets causing undetectable product contamination. These X-rayable gaskets can eliminate product recall, lower product loss and decrease the risk of elastomers consumed in finished product. When rubber breaks off a moving part, it can migrate through your system and into your product. Searching for and locating fragmented rubber parts is a costly, time-consuming, and often inconclusive process. Not locating a worn and lost rubber piece can have an even costlier outcome. More sizes available, call for details.

Screen Gaskets

Protect your pump, valves, and other components in fluid line

- Pre-filter before critical membrane filters
- Generate turbulence for enhanced mass or heat transfer
- Purify in chromatography applications

Screen gaskets are designed to be interchangeable with standard sanitary clamp gaskets. Gaskets are available in platinum-cured silicone, EPDM, FKM, PTFE, and Tuf-Steel® with mesh sizes of 10, 20, 40, 60, and 100. Screen mesh is constructed of 316L SS. Gaskets meet USP Class VI, FDA CFR Title 21 Section 177.2600, USDA, 3-A and cGMP criteria. All gaskets are free of animal-derived ingredients.

Platinum-Cured Silicone is an ideal choice for pharmaceutical, high-purity water, injectable, food, and beverage applications. Resists adhesion; tasteless/odorless; plasticizer-free. Usable from -58 to 446°F (-50 to 230°C). Sanitize in place at up to 30 psi and up to 123°C (235°F).

EPDM is an economical solution for transfer of water, acetones, or ketones. Good for chemical processes. Usable from -65 to 212°F (-54 to 100°C).

FKM offers excellent chemical resistance. Applications include pharmaceutical, chemical, automotive, and fuel lines. Easy to install yet durable; resists hardening and embrittlement. Usable from -25 to 400°F (-32 to 204°C). Sterilization is not recommended.

PTFE offers excellent chemical resistance. Resists high temperatures. Commonly used in pharmaceutical, food, and chemical applications. Usable from -450 to 550°F (-268 to 288°C).

Tuf-Steel is a unique blend of PTFE and 316L SS which offers excellent chemical resistance and forms a complete seal when torqued to 50 in-lbs. Usable from -20 to 450°F (-29 to 232°C). Handles repeated steam in place (SIP) cleaning with no creeping and minimal heat expansion.

Sanitary Sampling Smart Gasket®

Smart Gasket lets you take samples or readings from a sanitary line

- Measure temperature, take a sample, or dose chemicals into your process line.
- Install in between two sanitary fittings

The Smart Gasket is used as a standard sanitary gasket with standard Tri-clamp® fittings. The gaskets have molded ports that allow either a thermocouple or sampling tubes to be inserted into the line. Order the appropriate Smart Gasket clamp below.

Ports allow temperature measurement, injection, or withdrawal from a sanitary process line.

Smart Gasket® Clamps

The Smart Gasket clamps are required with the gaskets because they have slots in them that allow for the different number of ports. The clamps are specific to the number of ports on the gasket.

Accessories

The thermocouples allow you to obtain critical thermal mapping information needed in the validation process. Flexible thermocouple wire allows you to take a reading in the line, away from the connection. The solid thermocouple probe will take a reading in the center of the flow stream. The sampling tube has a luer fitting to connect to any syringe for sampling or adapt the luer to a pump for metered injection into the line.

O-Ring Kits

Available in four elastomers: Buna N, EPDM, silicone, and FKM. Kits contain 382 O-rings of various sizes from 1/8" ID x 1/4" OD x 1/16" thick to 1 3/4" ID x 2 1/8" OD x 3/16" thick. Use for quick-disconnect fittings, valves, pumps and other fluid handling products.

Ring holders inside the hard case kit allow you to easily size the O-rings.

Chromatography Fittings

A-E Stainless Steel (SS) Fittings include nuts and ferrules. They are equivalent to Parker and Swagelok®. Tees and crosses connect two or more columns from the injector (0.020" bore), and join multiple solvent lines before the injector (0.040" bore). Tees and crosses take 1/16" OD tubing. Tee includes three ferrules and nuts each. Cross includes four ferrules and nuts each. Zero dead-volume (ZDV) unions connect tubing without any dead volume.

F Standard Fingertight® I High-Pressure Fittings are in one piece, and are finger tightened to withstand 4000 psi. Use with 1/16" OD plastic or SS tubing.

G-H Standard Fingertight II High-Pressure Fittings hold up to 6000 psi. Wrench tighten the SS nut/PEEK† ferrule type to hold up to 10,000 psi. Use with 1/16" OD plastic or SS tubing.

I PEEK† Fingertight III Fittings withstand bursting pressures of any 1/16" OD tubing or to 6000 psi. Replacement ferrules available below right.

J-L PEEK† High-Pressure Unions, Tees, and Crosses hold up to 5000 psi and include Fingertight III fittings. Fittings work with any 1/16" OD tubing.

J-L PEEK† Low-Pressure Unions, Tees, and Crosses hold up to 1000 psi (1/16" tubing), or to 500 psi (1/8" tubing). PEEK flangeless fittings included. Models 02008-00, -10, and -20 take 1/16" OD tubing; models 02008-04, -14, and -24 take 1/8" OD tubing.

M PEEK† Fitting Kit contains twenty ferrules, six Fingertight III nuts with ferrules, two metric adapters, two 10-32 female to 1/4-28 female adapters, two unions with 0.020" bore, one union with 0.050" bore, tees with 0.020" bore and 0.050" bore each, and crosses with 0.020" and 0.050" bore each.

N-O Flangeless Fittings are easy to assemble; slide the ferrule over the tubing and finger tighten the nut. No need to flange your fluoropolymer tubing. Models 01939-30, -32 take 1/16" OD tubing and are rated at 1000 psi; models 01939-32, -42 take 1/8" OD tubing and are rated at 500 psi. Feature 1/4-28 threads.

P LiteTouch® Ferrule Systems feature unique double-coned ferrule and SS compression ring. Won't twist tubing while disconnecting. Compression ring remains attached to tubing for quick reconnection. Rated for 5000 psi (01939-36) or 7000 psi (01939-34 and -44). Order tool 01939-39 (below right) to remove compression ring. Order SS nuts ("A") or PEEK nuts ("P") in table.

Q Column Couplers allow zero dead-volume connections between column and column, column and detector, or column and guard column. Include a 5-cm length of 0.007" ID tubing.

†Maximum operating temperature is 302°F (150°C).

PTFE Connectors

These autoclavable PTFE connectors are available in two-way, three-way, and multiport tube connections to produce a very low dead volume connection for rigid tubing in a variety of sizes. All standard connectors (except 06473-07 and -08) include polypropylene (PP) caps, two large FKM O-rings per cap to connect 2- to 4-mm OD tubing, one small FKM O-ring to connect 1- to 2-mm OD tubing, and one PTFE cone. Most connectors are also available with integral on/off valves.

Using the interchangeable components, it is possible to create standard connections, chemically inert fluid pathway connections, and flat-bottom ports.

MORE info!

Making a Connection

Option 1) Standard connection:

Use the two large O-rings to connect 2- to 4-mm OD tubing. Add the small FKM O-ring to connect 1- to 2-mm OD tubing. Place the O-rings over the outside of the tubing and fit into the conical recess of the connector body. Screw the outer colored cap into place to compress the O-rings, thus making a seal with a maximum pressure rating of 50 psi.

Option 2) Chemical inert fluid pathway:

Use a PTFE cone that corresponds to the tube's outside diameter. Place the cone over the tube, fit into the conical recess in the connector, and screw the cap into place to make an all-PTFE connection with a maximum pressure rating of 50 psi.

Option 3) Flat-bottom port: Use the PTFE cone to convert the conical recess in the connector cap into a 1/4"-28 UNF flat-bottomed port. Screw a tube end fitting into the cap to create an all-PTFE, leak-free connection with a maximum pressure rating of 1000 psi. The connector can be used in any standard 1/4"-28 UNF threaded port. For soft-wall tubing, use a gripper (sold separately).

PTFE Valves

Micro Tubing Distribution Valves

Standard 4- or 5-port valves are rated to 50 psi and come with polypropylene caps, FKM O-rings and PTFE cones; can be used with 1- to 4-mm OD tubing. High-pressure valves are rated to 500 psi (34.5 bar); can be used with gripper fittings.

Tefzel® Adapters

These adapters connect your micro tubing to standard size tubing or to luer fitting systems. They are designed for use with small tubing fittings. Adapters with caps include zero dead volume PTFE cones and screw onto the fitting body. Adapters with 1/4"-28 UNF thread come with lock nuts and screw directly into existing fitting caps.

Inert 1/4"-28 UNF Tubing Adapters

- Ideal for use with solenoid valves
- No tools required for assembly to tubing!

These 1/4"-28 UNF tube end fittings and inverted cones provide a flangeless fitting that is economical and quick to assemble. Just slip the nut over the tubing, fit the cone to the end of tubing, and screw into the port. The inverted cone sits in a recess in the fitting to allow for maximum thread engagement. The fitting will stay sealed when finger tightened, even in shallow ports such as solenoid valves.

Flared PTFE Tubing Assemblies with Bottom Seal Fittings

Save time with ready-to-use assemblies

- ¼"–28 flat-bottom port fittings perfect for many standard instrument connections
- Sterilizable assembly with continuous PTFE fluid path

These convenient tubing assemblies with ¼"–28 fittings connect to many instruments and meters. Assemblies feature ¼" ID tubing with flared ends to provide a fluid path of continuous PTFE—process fluid purity is maintained. All assemblies may be sterilized with ethylene oxide.

Choose from two types of connectors: standard ¼"–28 fittings or the unique Click-N-Seal™ nut. With the Click-N-Seal, simply tighten until the nut clicks to ensure a secure fit—can't overtighten.

PTFE In-Line Filters

- Remove particulates from fluid to protect your solenoid valves
- All PTFE construction for harsh chemical applications

In-line filters have either a ¼"–28 UNF female port to take standard ¼"–28 UNF flat-bottom fittings or a bared fitting suitable for soft-wall tubing. A version is also available with cap type connectors, suitable for rigid tubing up to 4-mm OD. Replacement PTFE filter discs are available for each filter, too.

Filler/Dispensing Nozzles

Maximize the speed, precision, and accuracy of dispensing and filling applications

- Minimize splashing and dripping when dispensing into narrow- or wide-mouth containers
- Dimensional tolerances of ±0.05% for assured repeatability

These nozzles combine the ease of plastic components with the accuracy and reliability of stainless steel filler needles. Tight dimensional tolerances help to ensure precision in your dispensing applications. Nozzles feature a 316L stainless steel needle and a polycarbonate base with hose barb adapter. Materials meet FDA, USDA and USP Class VI requirements. All filler nozzles are sterilizable by ethylene oxide, autoclaving, or gamma irradiation.

Basket-Tip Filler Nozzles

Reduce foaming and splashing

- Lower costs for cleaning, sterilization, and validation

NEW

These nozzles offer the benefits of the standard filler/dispensing nozzles by combining the ease of single-use plastic components with the accuracy and reliability of stainless steel filler needles. Plus, nozzles feature a basket needle tip that has two outlets angled at 10° to split the flow into two streams, forcing the fluid to gently cascade down the sides of your container. This basket tip is especially useful for liquids that have issues with foaming or splashing and/or maintaining a fluid column.

Tight dimensional tolerances help to ensure precision in your dispensing applications. Nozzles feature a 316L stainless steel needle and a base with hose barb adapter. Materials meet FDA, USDA and USP Class VI requirements. All filler nozzles are sterilizable by ethylene oxide, autoclaving, or gamma irradiation.
